

Hills sand cement floor screed

Our specialist ready-mixed sand cement floor screed is the ideal way in which to create a high quality and level finish on floor areas. It can be delivered or collected from either of our plants at Lower Compton, near Calne or Shorncote, near Cirencester.

The sand cement screed mix uses a specially selected Bristol channel dredged sand for a superior laying and finish. It incorporates a retarder into the screed which delays setting for sufficient period to lay, compact and finish the screed. Polypropylene fibres can be added to the mix if required.

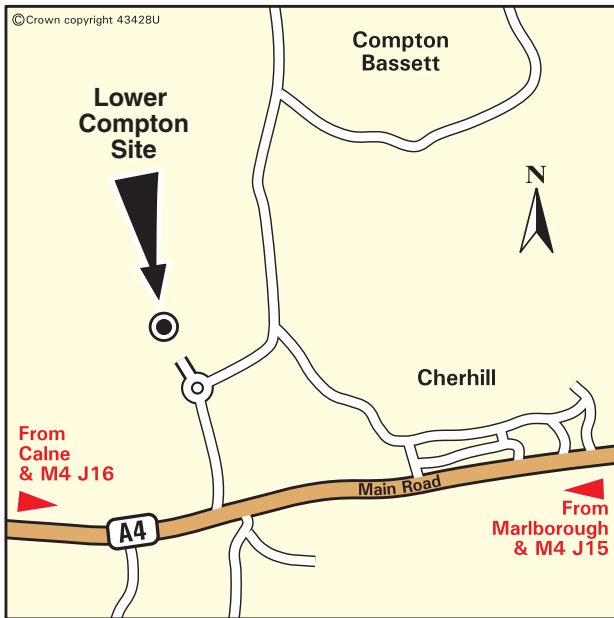

The service is available for large contracts or for single loads, which can be delivered on tippers varying in size from two to four axles and carrying loads from 1 to 20 tonnes (0.5 to 9.1 cubic metres). Screed deliveries are normally the first delivered each day.
