

Hills specialised aggregates

DECORATIVE & LANDSCAPING

COTSWOLD PATH GRAVEL

This aesthetically pleasing gold coloured product will compact to a stable finish and is ideally suited for use on paths and driveways as a more ecological, decorative and cost-effective alternative to asphalt or concrete.

TOPSOIL

Hills prides itself on quality products and this topsoil is no exception. Screened at 20mm and blended with top quality compost, it can be used for a number of applications for commercial and park landscaping solutions. NHBC (BS3882) approved topsoil, for domestic use, is also available on request.

DECORATIVE STONE

These products are available in a range of different sizes and colours:

Cotswold chippings

Flint

Slate

Rockery stone

AGRICULTURAL

ANIMAL BEDDING SAND

This popular product, widely supplied to local farmers, is a clean, washed silica sand. It is an economical solution aimed at promoting livestock health and hygiene.

specialised aggregates

SPORTS APPLICATIONS

GOLF COURSE BUNKER SAND

For this application, Hills offer a number of products to choose from, to suit various different golf course requirements and specifications.

ROOTZONE SAND

A blend of silica sand and screened processed topsoil. Our rootzone sand has widespread applications on golf greens and tees. It is an effective and proven aid to quality green-keeping.

DRAINAGE LAYERS

The construction of both synthetic and natural sports pitches relies heavily on creating good drainage using a range of different gravel sizes. Acting as a drainage layer, our gravels often play an integral role in this procedure.

SILICA SAND

Widely used throughout the equestrian arena market. We are happy to supply complimentary sample bags to ensure that each product is fit for its intended purpose.

TYPE 3

This proven product has become increasingly popular as a sub-base, ideally suited to various sports applications, offering the stability of type 1 but with superior drainage properties.

TAILOR-MADE AGGREGATES

Many of our customers have their own specific aggregates needs that are not met by any one product. In such cases we can tailor-make and blend our products to individual requirements.
